Summary

Computer Science and Engineering student with hands-on experience in Full Stack Development, Machine Learning, and Web Application Development. Skilled in Python, Java, React, Flask, MySQL, and MongoDB.

Education

A J Institute of Engineering and Technology (AJIET) <i>B.E. Computer Science & Engineering</i> – CGPA (1st–6th Semester): 8.57	Mangalore, Karnataka 2023 – 2027
SR PU College <i>Pre-University Course (PUC)</i> – Percentage: 90.5%	Hebri, Karnataka
SR Public School <i>Secondary School Leaving Certificate (SSLC)</i> – Percentage: 93.28%	Hebri, Karnataka

Technical Skills

Languages: Python, Java, C

Databases: MySQL, MongoDB

Web Technologies: HTML5, CSS3, JavaScript, React.js

Tools: Git, GitHub, VS Code

Soft Skills Problem Solving, Communication, Adaptability, Team Collaboration, Leadership, Time Management

Projects

Credit Card Fraud Detection System | *Python, Flask, XGBoost, React, MongoDB*

- Developed a machine learning-based fraud detection system to identify potentially fraudulent credit card transactions.
- Implemented XGBoost with SMOTE-based class balancing and integrated the trained model with a Flask backend for prediction.
- Built a React-based interface to submit transaction details and display fraud prediction results.

PawConnect | *React.js, Node.js, Express.js, MongoDB, JWT, REST API, Render*

- Built a full-stack pet adoption platform with user authentication, pet management, listings, and adoption-request workflows
- Developed secure JWT-protected REST APIs with MongoDB for reliable data persistence.
- Deployed the frontend and backend on Render with a live production application.

Library Membership Registration System | *HTML, CSS, JavaScript, PHP, EmailJS*

- Developed a web-based system to streamline library membership registration and user information collection.
- Implemented responsive frontend forms using HTML, CSS, and JavaScript with PHP-based backend processing.
- Integrated EmailJS to enable automated email communication for registration-related information.

SmartCattleNet | *React, TypeScript, Tailwind CSS, Python, FastAPI, PostgreSQL, Machine Learning*

- Developed a smart cattle management platform to monitor cattle health, activity, and farm-related information.
- Implemented a responsive dashboard using React, TypeScript, and Tailwind CSS for managing and visualizing cattle data.
- Built RESTful backend APIs using Python and FastAPI with PostgreSQL, SQLAlchemy, Alembic, and JWT-based authentication.
- Integrated machine learning models to analyze cattle data and provide health-related insights for improved livestock management.
